S: STATISTICS AUSTRIA, EU-SILC 2004-2020, for definitions on the indicators see 'Tabellenband EU-SILC 2020'. Different reference periods: risk of poverty as well as household work intensity refer to the previous calendar year, deprivation refers to time of interview (current or the 12 months preceding the interview). Compiled on 29 April 2021 - 1) Based on the national Income and Living conditions Regulation (ELStV) in EU-SILC 2012 register data were used for the first time to compute components of the household income as well as for weighting. To monitor the Europe 2020 strategy despite switching to register data in EU-SILC 2012, Statistics Austria has done a back-calculation for EU-SILC 2008-2011 with register data. These revised values are presented in this table. From 2004 to 2007 only values based on survey data can be presented. Due to the methodological break changes in the indicators from 2007 to 2008 cannot be interpreted in terms of content. - 2) Only persons aged 0 to 59 years.
